

AI in the Workplace, Part 2

Hint sheets: one page per exercise, in case the website is out of reach.

The website is the main thing. Every prompt has a COPY button and every file a DOWNLOAD button there.

<https://wmgmm.github.io/part2/>

Before you start: sign in to Gemini and Copilot with your Cardiff work account. Download the sustainability plan, Sustainable-Futures-en.pdf, from the site. It is 10.7 MB.

THE EXERCISES

01 The Landscape Research the plan, then fact-check it.

02 The Image Turn a picture back into the prompt.

03 The Game Build a game out of a policy PDF.

04 The Module Run a skill, get a training session.

05 The Brand One skill, one Cardiff-branded deck.

06 The Story Chart the real numbers, then check them.

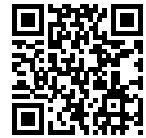

Bonus Analyse the Numbers Data analysis with Copilot and Verify with Gemini using a skill

Responsible AI, every time: this is your work and AI is your assistant. Sign in with the work account, keep C1 and C2 data out of anything public, and check before you trust.

The Matts, Cardiff University, September 2026.

EXERCISE 01

Research the Plan, Then Have a Second AI Check the Work

Research how other organisations deliver what the plan promises, then have Copilot prove every claim.

Gemini Deep Research + Copilot · <https://wmgmm.github.io/part2/#/m1>

DOWNLOAD FROM THE SITE FIRST

Sustainable-Futures-en.pdf · Deep_research_output.pdf

STEPS

1. Turn on Deep Research and paste the prompt

Use Gemini. Click the + under the box where you type, then select Deep Research (limited usage).

ENABLE, then enable the control shown on the site

THE BRIEF (RUN IT AS IT IS TODAY)

This prompt is 4 lines long. Copy it from the website, step 1, with the COPY PROMPT button.

2. Review and Edit the plan

Edit the plan it shows you if it does not match what you want. Changing a line now is cheaper in time and energy than waiting for the run and redoing it. Then press Start research.

3. Copy the Deep Research Report

Click "Share and export", then "Copy contents". Paste the report into a Word document and save it.

OR PASTE IT STRAIGHT IN: Skip Word and paste the report at the end of the Copilot prompt in step 4.

4. Top and tail it in Copilot

Use Copilot. Attach the file you saved in step 3. You could copy and paste after the last line of the prompt, but it is best to attach a file because a long paste can get truncated.

NEW CHAT, attach the file you saved in step 3 + paste the prompt above

THE FACT-CHECK AND REDRAFT

This prompt is 137 lines long. Copy it from the website, step 4, with the COPY PROMPT button.

[attach the file, or paste the copied report after the last line]

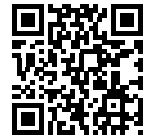

5. Responsible AI

AI uses energy: a chat reply is about a web search, a Deep Research run far more. Fix the plan at step 2 rather than rerun. Handy hint: guide AI on sources you trust, peer-reviewed or official ones. The web can be wrong too.

"A citation is not a check. The habit worth keeping is not trusting one model less, it is making a second one prove the first, then reading the list of what it changed."

The Matts

Analyse a Photo to Build a Reusable Prompt That Replicates Its Unique Style

Turn a picture you like into a prompt you own, then freeze it as a reusable style block.

Copilot · <https://wmgmm.github.io/part2/##m2>

DOWNLOAD FROM THE SITE FIRST

cardiff_study_space.jpg · Example_Style_Block.md

STEPS

1. Clone the style of the image into a reusable prompt

Use Copilot. Download the picture from the card above, attach it with the paperclip, and paste the prompt.

attach cardiff_study_space.jpg

THE PROMPT THAT TURNS AN IMAGE INTO A PROMPT

```
Review the image and reverse-engineer it into a reusable AI image generation prompt that can be
pasted directly into an AI image generator.
Return ONLY the final prompt. No introductions, explanations, notes, markdown, code fences, analysis
or commentary.
Format exactly as:
Create an image of [INSERT SUBJECT HERE]
Composition: ...
Camera/Perspective: ...
Lighting: ...
Colour Palette: ...
Illustration Style: ...
Mood: ...
Describe each section as image-generation instructions rather than observations. Capture enough
detail to recreate the image accurately while allowing the subject to be replaced. Keep the subject
placeholder exactly as written.
```

2. Use the reusable prompt from step 1 with a new subject

Start a NEW chat. Paste the prompt Copilot generated in step 1, replace [INSERT SUBJECT HERE] with the example below, and send it. Remember to experiment: for this one the subject is Mr Judge complaining about his noisy cats, with a sign.

NEW CHAT, attach the prompt from step 1, subject replaced

AN EXAMPLE SUBJECT

```
Mr Judge complaining about his noisy cats, with a sign
```

3. Try to ban something from the image

Add the line below and send it. You **MIGHT** still get text: naming what you do not want puts it into the prompt, and the noun outweighs the negation. Describe what you want instead, a bare white wall rather than no signage.

SAME CHAT, attach paste the prompt above

THE LINE TO ADD

```
No text anywhere in the image.
```

STILL GOT TEXT?: Rewrite the ban as the thing you do want. Describe the surfaces, do not name what should not be on them.

4. Audit, revise and improve accessibility of your new images

Download one of your new images with the download icon, then run the audit on it. Alt text is the line a screen reader reads aloud in place of the picture. If the description does not match what you meant, the image failed.

NEW CHAT, attach the image you just made + paste the prompt above

THE ACCESSIBILITY AUDIT

This prompt is 15 lines long. Copy it from the website, step 4, with the COPY PROMPT button.

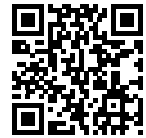

5. Responsible AI

AI can support accessibility: alt text, a plain description, what a screen reader would give. A start, but not a substitute for asking the people who actually rely on it.

"Describe what you want rather than banning what you do not. And an image the model cannot describe back to you is one a screen reader user cannot use either."

The Matts

Vibe Code a Playable Game From the Plan in Canvas

Build a playable 8-bit game from the sustainability plan, fully specified, without writing code.

Gemini Canvas · <https://wmgmm.github.io/part2/##/m3>

DOWNLOAD FROM THE SITE FIRST

Sustainable-Futures-en.pdf

STEPS

1. Run the detailed prompt with the PDF for context

Use Gemini. Turn Canvas on in the Tools menu and attach the plan before you send this. The detail and the document are what lift the output.

NEW CHAT, attach Sustainable-Futures-en.pdf, then enable the Canvas

THE ENGINEERED ASK

This prompt is 1 lines long. Copy it from the website, step 1, with the COPY PROMPT button.

[Canvas on, attach Sustainable-Futures-en.pdf]

2. Read the code tab

Canvas has a Code toggle at the top, next to Preview. Click it and skim the strings: the title, the messages, the food names. Which of them came from the PDF?

3. Play it, then give AI feedback

Name the one thing that spoils it and type that into the chat. Good feedback says what is wrong and what you want instead: "too fast, slow the items by half". "This is bad" gives it nothing to work with. Canvas rebuilds it in place.

4. Play the ones the Matts made earlier

Two of ours. The arcade one went through the feedback loop you just used; the text adventure was built from a written brief. Play either and watch the scoring: avoiding demand beats offsetting it, because that is the order the plan puts them in.

OPTIONAL: THE ARCADE ONE WE MADE EARLIER: Demand_First_Game.html (on the site)

OPTIONAL: THE TEXT ADVENTURE: Demand_First_Adventure.html (on the site)

5. Responsible AI

Share responsibly: no C1 or C2 data in anything you make public. Do not put staff, student or sensitive financial or research data into something you are sharing by link.

"The model is the same one that would have given you a toy from one thin line. Everything that separates that from this is in the prompt: the detail, the document, the constraints. Then share responsibly, because a Canvas link is public and public is not where work data goes."

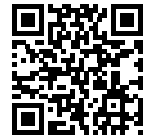

The Matts

EXERCISE 04

Build the Staff Training With a Skill

Build a half-hour training session on the sustainability plan pdf, using a skill file.

Copilot or Gemini · <https://wmgmm.github.io/part2/#/m4>

DOWNLOAD FROM THE SITE FIRST

Training_Module_Builder.md · Sustainable-Futures-en.pdf

STEPS

1. Copy the prompt and paste it

Use Copilot or Gemini. You still prompt; the skill helps make it follow your best practice.

YOUR PROMPT, PLUS ONE LINE

```
Build me a half-hour training session on the sustainability pdf.  
  
Audience: professional services staff who have not read it and will not.  
What matters most: that they could apply the Demand First ladder to a real purchase on Monday.  
  
Follow the attached skill file as your instructions.
```

[attach the sustainability pdf and the skill file]

2. Attach both files

In Copilot the button is a paperclip; in Gemini it is a + under the box where you type. Attach both, then send with the prompt above.

attach Training_Module_Builder.md + Sustainable-Futures-en.pdf

3. Review and Augment

It is useful to focus on the gap note: what the training needed and the plan does not say, no dates, no owners, no thresholds. In real life this is where you augment it, editing, deleting and adding; today, just look over them.

4. Save/copy the training session

In Copilot, the three dots give you Export to Word. In Gemini, the copy icon under the answer copies the whole thing, and Exercise 05 pastes it straight into a notebook, so you never need a file. Note: we always have classic copy and paste.

5. Responsible AI

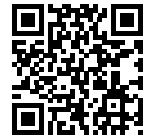

The human value is in the review and the improvement.

"Jisc calls where most teams sit stage two: experimenting. Stage three is operational. Nothing you did today was hard; doing it the same way twice is the hard part, and the only part that scales."

The Matts

EXERCISE 05

Turn the Training Into Internal Slides That Look Like Cardiff

Turn your training session into a slide deck that looks like it came from this university.

Gemini Notebook · <https://wmgmm.github.io/part2/#/m5>

DOWNLOAD FROM THE SITE FIRST

Example_Training_Session.pdf

STEPS

1. Add your training session to a notebook

Use Gemini Notebook. Click Create new, then paste your Exercise 04 training session in as a source. If 04 did not run for you, upload the backup PDF above instead.

2. Click Slides, copy the prompt and paste the skill file

In the Studio pane, click Slide Deck. Paste the prompt into the description box, then COPY the skill below and paste it underneath. Do NOT add it as a source, or the deck becomes about the rules.

SKILL 2: MAKE IT CARDIFF: Cardiff_Brand_SKILL.md (on the site)

THE DECK DESCRIPTION

Training slide deck on the Demand First ladder, so staff can apply it in practice.

[then paste the Cardiff brand skill underneath this]

3. Generate the deck, then export

Read the prompt back before you press Generate. The three-dot menu on the slide viewer then gives you PowerPoint or PDF.

4. Now run it again with a different skill

Once the first deck is saved, open Slide Deck again. Same prompt, same source, but paste this skill underneath instead. One notebook, two skills, two very different decks.

SKILL 3: NOW MAKE IT WATCHABLE: TheMattsBrandSkill.md (on the site)

THE SAME DECK DESCRIPTION

Training slide deck on the Demand First ladder, so staff can apply it in practice.

[this time paste TheMattsBrandSkill.md underneath]

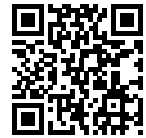

5. Responsible AI

AI branding will not be as good as a human designer, so use it for low-risk work like that internal presentation, not for anything public facing.

"Two decks, one source, one prompt. Everything that differs between them came from the skill file, which is the clearest evidence you will get today that a skill is worth writing down."

The Matts

Turn Ten Years of Real Data Into a Story You Can Show

Turn ten years of real emissions data into an animated story that a room can follow.

Gemini + Gemini Canvas · <https://wmgmm.github.io/part2/#/m6>

DOWNLOAD FROM THE SITE FIRST

HESA_Estates_Workshop.csv

STEPS

1. Build the dashboard in Gemini's Canvas

Use Gemini, in a new chat, with the CSV attached and Canvas on from the Tools menu. Pro handles it better, but if no preview appears, switch to Flash. The first build often falls over: just send it again.

NEW CHAT, attach HESA_Estates_Workshop.csv, then enable the Canvas

THE BUILD PROMPT

This prompt is 175 lines long. Copy it from the website, step 1, with the COPY PROMPT button.

[Canvas on and attach HESA_Estates_Workshop.csv]

2. Open the one the Matts made earlier, then compare against yours

Open ours and run yours beside it. Same prompt, same file, so do they agree?

OPTIONAL: ONE WE MADE EARLIER: Cardiff_Estates_Dashboard.html (on the site)

3. Always verify, and repair if required

The first version of The Matts' app got the data slightly wrong, and it flattered Cardiff (Thanks Gemini ■). Run the repair in this same chat, reattaching the CSV.

SAME CHAT, attach paste the prompt above + HESA_Estates_Workshop.csv

THE REPAIR PROMPT

The app has a copy of its data written inside it. Check every number in the app against the CSV, which is the only source you should trust. List anything that does not match, then rebuild the file using the CSV values only. Do not retype, round or fill in any figure: if a cell is blank, show NEEDS DATA.

[reattach the CSV in this chat]

OPTIONAL: THE CLEANER AUDIT: A new chat is the better audit: a model checking its own work tends to defend it. So we downloaded the HTML the Download button, opened a new Gemini chat with Canvas on, and attached the app and the CSV together. Afterwards, open Code and Show recent changes to see exactly what it altered. Canvas sometimes will not display an uploaded app, which is why this is optional.

4. Responsible AI

Human evaluation is a key part of the workflow, but AI can still augment this verification.

"Transforming numbers into a story can be engaging. The story is only worth telling once the numbers in it have been checked against the file they came from."

The Matts

BONUS EXERCISE

Ten Years of Real Data, Run Twice and Checked

Analyse ten years of Cardiff's real emissions, then check the answer in a second tool before you trust it.

Copilot + Gemini · <https://wmgmm.github.io/part2/#!/bonus1>

DOWNLOAD FROM THE SITE FIRST

HESA_Estates_Workshop.csv

STEPS

1. Attach the data and run the prompt

Start in Copilot. Download the HESA_Estates_Workshop.csv file from the card above and attach it.

attach HESA_Estates_Workshop.csv

YOUR PROMPT

This prompt is 10 lines long. Copy it from the website, step 1, with the COPY PROMPT button.

[attach HESA_Estates_Workshop.csv]

2. Verify it in Gemini, with the skill

Now Gemini, in a new chat. Attach the skill and the CSV, paste in the KEY FIGURE line from Copilot, and do not tell it where that line came from. A rubber stamp is not a check.

NEW CHAT, attach Verify_And_Repair.md + HESA_Estates_Workshop.csv

SKILL 5: VERIFY AND REPAIR: Verify_And_Repair.md (on the site)

THE VERIFY PROMPT

Follow the attached skill file as your instructions.

FIGURE TO CHECK: [paste the KEY FIGURE line here]

[attach both, then paste the KEY FIGURE line over the brackets]

"Ask for the code and the numbers are computed rather than guessed, which is the difference between a finding and a plausible sentence."

The Matts
