

AI in the Workplace, Part 2

Hint sheets: one page per exercise, in case the website is out of reach.

The website is the main thing. Every prompt has a COPY PROMPT button and every file a DOWNLOAD button there. The sheets carry the short prompts; the long ones are on the site only.

<https://wmgmm.github.io/part2/>

BEFORE YOU START

1. Sign in to Gemini and Copilot with your Cardiff work account.
2. Open the website: scan the QR code or type the address.
3. Pick an exercise. Its sheet lists the files it needs under FILES: download them from the exercise page before you begin.
4. The sustainability plan, Sustainable-Futures-en.pdf, is 10.7 MB and is used by exercises 01, 03 and 04: download it once.

HOW TO READ A SHEET

NEW CHAT means start a fresh conversation; **SAME CHAT** means stay in the one you are in.

Attach means add the file: the paperclip in Copilot, the + under the box in Gemini. **Paste** means put the text into the chat box. **Turn on** names a tool to switch on before you send.

Grey boxes are prompts: copy them exactly. Square brackets under a prompt are an instruction to you, not text to send. Step numbers match the website.

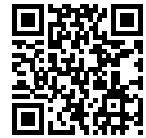

THE EXERCISES

01	The Landscape	Research the plan, then fact-check it.	Gemini Deep Research + Copilot	10 min
02	The Image	Turn a picture back into the prompt.	Copilot	13 min
03	The Game	Build a game out of a policy PDF.	Gemini Canvas	11 min
04	The Module	Run a skill, get a training session.	Copilot or Gemini	12 min
05	The Brand	One skill, one Cardiff-branded deck.	Gemini Notebook	19 min
06	The Story	Chart the real numbers, then check them.	Gemini + Gemini Canvas	15 min
Bonus	Analyse the Numbers	Data analysis with Copilot and Verify with Gemini using a skill	Copilot + Gemini	11 min

Nobody runs all six: the core steps add up to more than an hour, so choose.

The Matts, Cardiff University, September 2026.

Research the Plan, Then Have a Second AI Check the Work

scan for this page

Research how other organisations deliver what the plan promises, then have Copilot prove every claim.

TOOL	Gemini Deep Research + Copilot · sign in with your Cardiff account
FILES	Sustainable-Futures-en.pdf THE SUSTAINABILITY PLAN · top of the page, DOWNLOAD button Deep_research_output.pdf OPTIONAL: A FINISHED DEEP RESEARCH RUN · top of the page, DOWNLOAD button
WEBSITE	https://wmgmm.github.io/part2/#/m1 · the QR code opens it. Every prompt has a COPY PROMPT button there.
TIME	about 10 minutes

STEPS, NUMBERED AS ON THE WEBSITE

1. Turn on Deep Research and paste the prompt · 2 min

Use Gemini. Click the + under the box where you type, then select Deep Research (limited usage). Paste the brief and send it: Gemini replies with a research plan, not the report. No Deep Research on your account? Use the Matts' report at step 4.

Turn on Deep Research

THE BRIEF (RUN IT AS IT IS TODAY)

The Sustainable Futures plan establishes a four-stage 'Demand First' decision hierarchy: avoid demand, source low-impact alternatives, ensure circularity, and responsibly manage unavoidable impacts. Compare this framework against the carbon reduction and procurement strategies of two other universities and two large public-sector or corporate bodies.

- How do other organisations enforce demand reduction in practice (e.g. business travel policies, ICT procurement, lab equipment rationalisation) versus relying on engineering interventions or carbon offsetting?
- What specific behavioural nudges, data dashboards (e.g. 'sustainability commons'), or policy restrictions have proven most effective at curbing resource consumption at the source?

2. Review and edit the deep research plan · 2 min

Edit the deep research plan if it does not match what you want: changing a line now is cheaper in time and energy than a rerun. Then press Start research. The run takes ten minutes or more, so do not wait: do step 4 with the Matts' report from the top of the page, and come back when yours is done.

3. Copy the Deep Research Report · 1 min

Click "Share and export", then "Copy contents". Paste the report into a new Word document and save it to your Desktop or OneDrive, where Copilot can find it.

OR PASTE IT STRAIGHT IN

Skip Word: in step 4, paste the prompt into Copilot first, then come back and click Copy contents again, and paste the report after the prompt's last line. Do not press Enter in between.

4. Top and tail it in Copilot · 5 min

Use Copilot. Attach the file you saved in step 3. You could copy and paste after the last line of the prompt, but it is best to attach a file because a long paste can get truncated.

NEW CHAT · **Attach** the file you saved in step 3 · **Paste** the prompt below

THE FACT-CHECK AND REDRAFT

Long prompt, 137 lines, not printed: copy it from the website, step 4, with the COPY PROMPT button.

[attach the file, or paste this prompt first, then the report after its last line]

Analyse a Photo to Build a Reusable Prompt That Replicates Its Unique Style

scan for this page

Turn a picture you like into a prompt you own, then freeze it as a reusable style block.

TOOL	Copilot · sign in with your Cardiff account
FILES	cardiff_study_space.jpg THE PICTURE FOR THIS EXERCISE · top of the page, DOWNLOAD button Example_Style_Block.md OPTIONAL: A REUSABLE PROMPT WE MADE EARLIER · top of the page, COPY button
WEBSITE	https://wmgmm.github.io/part2/#/m2 · the QR code opens it. Every prompt has a COPY PROMPT button there.
TIME	about 13 minutes

STEPS, NUMBERED AS ON THE WEBSITE

1. Clone the style of the image into a reusable prompt · 3 min

Use Copilot. Download the picture from the card above, attach it with the paperclip, and paste the prompt.

Attach cardiff_study_space.jpg

THE PROMPT THAT TURNS AN IMAGE INTO A PROMPT

```
Review the image and reverse-engineer it into a reusable AI image generation prompt that can be pasted directly into an AI image generator.
Return ONLY the final prompt. No introductions, explanations, notes, markdown, code fences, analysis or commentary.
Format exactly as:
Create an image of [INSERT SUBJECT HERE]
Composition: ...
Camera/Perspective: ...
Lighting: ...
Colour Palette: ...
Illustration Style: ...
Mood: ...
Describe each section as image-generation instructions rather than observations. Capture enough detail to recreate the image accurately while allowing the subject to be replaced. Keep the subject placeholder exactly as written.
```

2. Use the reusable prompt from step 1 with a new subject · 4 min

Start a NEW chat. Paste the prompt Copilot generated in step 1, replace [INSERT SUBJECT HERE] with the example below, and send it. Remember to experiment: for this one the subject is Mr Judge complaining about his noisy cats, with a sign.

NEW CHAT · **Paste** the prompt from step 1, subject replaced

THE SUBJECT: PASTE THIS OVER [INSERT SUBJECT HERE]

```
Mr Judge complaining about his noisy cats, with a sign
```

3. Try to ban something from the image · 3 min

A. In the same chat, add the line below and send it. You **MIGHT** still get text: naming what you do not want puts it into the prompt, and the noun outweighs the negation.

SAME CHAT · **Paste** the prompt below

THE LINE TO ADD

```
No text anywhere in the image.
```

B. Still got text? Send the ban rewritten as the thing you do want: describe the surfaces, do not name what should not be on them.

Instead of "No text" write "A blank sign, bare walls and blank screens"

Instead of "No cats" write "Mr Judge alone, the sofa to himself"

Instead of "No cars" write "A deserted street"

Instead of "No people" write "An empty room"

SAME CHAT · **Paste** the prompt below

THE LINE TO SEND INSTEAD

```
A blank sign, bare walls and blank screens
```

C. Still got text? Those words are in this chat and still pulling on it. Start a NEW chat and paste the style prompt Copilot made in step 1, with what you want written into the subject, not banned at the end.

NEW CHAT · **Paste** the prompt from step 1, subject rewritten

THE SUBJECT, REWRITTEN: PASTE THIS OVER [INSERT SUBJECT HERE]

```
Mr Judge complaining about his noisy cats, with a BLANK sign
```

4. Audit, revise and improve accessibility of your new images · 3 min

Download one of your new images with the download icon, then run the audit on it. Alt text is the line a screen reader reads aloud in place of the picture. If the description does not match what you meant, the image failed.

NEW CHAT · **Attach** the image you just made · **Paste** the prompt below

THE ACCESSIBILITY AUDIT

Long prompt, 15 lines, not printed: copy it from the website, step 4, with the COPY PROMPT button.

Vibe Code a Playable Game From the Plan in Canvas

scan for this page

Build a playable 8-bit game from the sustainability plan, fully specified, without writing code.

TOOL	Gemini Canvas · sign in with your Cardiff account
FILES	Sustainable-Futures-en.pdf THE SUSTAINABILITY PLAN · top of the page, DOWNLOAD button Demand_First_Game.html OPTIONAL: THE ARCADE ONE WE MADE EARLIER · step 4, OPEN IT button Demand_First_Adventure.html OPTIONAL: THE TEXT ADVENTURE · step 4, OPEN IT button
WEBSITE	https://wmgmm.github.io/part2/#/m3 · the QR code opens it. Every prompt has a COPY PROMPT button there.
TIME	about 11 minutes

STEPS, NUMBERED AS ON THE WEBSITE

1. Run the detailed prompt with the PDF for context · 4 min

Use Gemini, in a new chat. Click the + under the box to attach the plan, paste the prompt below, then turn Canvas on and send. The detail and the document are what lift the output.

NEW CHAT · **Attach** Sustainable-Futures-en.pdf · **Turn on** Canvas

THE ENGINEERED ASK

Please review the attached 'Sustainable Futures' document. I would like you to create a playable 8-bit web game in a single HTML file using JavaScript and CSS. The visual style must mimic a vintage ZX Spectrum game with a black background and bright, blocky neon colours. The player controls a pixelated character who must cross a busy university dining hall. The goal is to collect low-impact foods to score points, while dodging high-carbon items moving rapidly across the screen. If you hit a high-carbon item, you lose a life. Crucially, use specific terminology, quotes, or policy goals directly from the attached document for the game's title, the introductory screen text, and the 'game over' messages. For example, you could name the game after one of the core goals or reference the 'Demand First' principle in the instructions. The game should help the player learn the plan's four-stage 'Demand First' principle. Please make it fully playable with keyboard arrow keys.

[Canvas on, attach Sustainable-Futures-en.pdf]

2. Read the code tab · 2 min

Canvas has a Code toggle at the top, next to Preview. Click it and skim the strings: the title, the messages, the food names. Which of them came from the PDF?

3. Play it, then give AI feedback · 3 min

Name the one thing that spoils it and type that into the chat. Good feedback says what is wrong and what you want instead: "too fast, slow the items by half". "This is bad" gives it nothing to work with. Canvas rebuilds it in place.

4. Play the ones the Matts made earlier · 2 min

Two of ours.

From the website · Demand_First_Game.html (OPTIONAL: THE ARCADE ONE WE MADE EARLIER, OPEN IT button) · Demand_First_Adventure.html (OPTIONAL: THE TEXT ADVENTURE, OPEN IT button)

EXERCISE 04

Build the Staff Training With a Skill

Build a half-hour training session on the sustainability plan pdf, using a skill file.

scan for this page

TOOL	Copilot or Gemini · sign in with your Cardiff account
FILES	Training_Module_Builder.md SKILL 1: BUILD THE TRAINING · top of the page, DOWNLOAD button Sustainable-Futures-en.pdf THE SUSTAINABILITY PLAN · top of the page, DOWNLOAD button
WEBSITE	https://wmgmm.github.io/part2/#/m4 · the QR code opens it. Every prompt has a COPY PROMPT button there.
TIME	about 12 minutes

STEPS, NUMBERED AS ON THE WEBSITE

1. Copy the prompt and paste it · 2 min

Use Copilot or Gemini. Paste the prompt but do not send it yet: the two files go in first, in step 2. You still prompt; the skill makes the answer follow your best practice.

YOUR PROMPT, PLUS ONE LINE

Build me a half-hour training session on the sustainability pdf.

Audience: professional services staff who have not read it and will not.

What matters most: that they could apply the Demand First ladder to a real purchase on Monday.

Follow the attached skill file as your instructions.

[do not send yet: attach both files first, step 2]

2. Attach both files · 4 min

Download both from the cards at the top if you have not already. In Copilot the button is a paperclip; in Gemini it is the + under the box. Attach both, check both names show above the prompt, then send.

Attach Training_Module_Builder.md and Sustainable-Futures-en.pdf

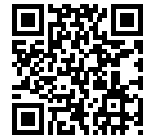

3. Review and Augment · 4 min

It is useful to focus on the gap note: what the training needed and the plan does not say, no dates, no owners, no thresholds. In real life this is where you augment it, editing, deleting and adding; today, just look it over.

4. Copy the training session, Exercise 05 needs it · 2 min

In Copilot, copy the answer (or the three dots give you Export to Word). In Gemini, the copy icon under the answer copies the whole thing, and Exercise 05 pastes it straight into a notebook, so you never need a file. Note: we always have classic copy and paste. If it did not run, move on: Exercise 05 has a ready-made session you can use.

Turn the Training Into Internal Slides That Look Like Cardiff

scan for this page

Turn your training session into a slide deck that looks like it came from this university.

TOOL	Gemini Notebook · sign in with your Cardiff account
FILES	Example_Training_Session.pdf OPTIONAL: BACKUP TRAINING SESSION · top of the page, DOWNLOAD button Cardiff_Brand_SKILL.md SKILL 2: MAKE IT CARDIFF · step 2, COPY button TheMattsBrandSkill.md SKILL 3: NOW MAKE IT WATCHABLE · step 4, COPY button
WEBSITE	https://wmgmm.github.io/part2/#/m5 · the QR code opens it. Every prompt has a COPY PROMPT button there.
TIME	about 19 minutes

STEPS, NUMBERED AS ON THE WEBSITE

1. Add your training session to a notebook · 4 min

Use Gemini Notebook. Click Create new, then Add source, choose Copied text, paste your Exercise 04 training session and click Insert. If 04 did not run for you, upload the backup PDF above instead.

2. Click Slides, copy the prompt and paste the skill file · 4 min

In the Studio pane, click Slide Deck. Click COPY PROMPT, under the skill card, and paste it into the description box. Press Enter, then click COPY on the skill card, not DOWNLOAD, and paste that underneath. Do NOT add it as a source, or the deck becomes about the rules.

From the website · Cardiff_Brand_SKILL.md (SKILL 2: MAKE IT CARDIFF, COPY button)

THE DECK DESCRIPTION

Training slide deck on the Demand First ladder, so staff can apply it in practice.

[then paste the Cardiff brand skill underneath this]

3. Generate the deck, then export · 6 min

Read the prompt back before you press Generate. Generation takes a few minutes: read the brand skill while you wait. The three-dot menu on the slide viewer then gives you PowerPoint or PDF.

4. Now run it again with a different skill · 5 min

Once the first deck is saved, open Slide Deck again. Same prompt, same source, but paste this skill underneath instead. One notebook, two skills, two very different decks.

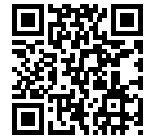

From the website · TheMattsBrandSkill.md (SKILL 3: NOW MAKE IT WATCHABLE, COPY button)

THE SAME DECK DESCRIPTION

Training slide deck on the Demand First ladder, so staff can apply it in practice.

[this time paste TheMattsBrandSkill.md underneath]

Turn Ten Years of Real Data Into a Story You Can Show

scan for this page

Turn ten years of real emissions data into an animated story that a room can follow.

TOOL	Gemini + Gemini Canvas · sign in with your Cardiff account
FILES	HESA_Estates_Workshop.csv TEN YEARS OF REAL DATA · top of the page, DOWNLOAD button Cardiff_Estates_Dashboard.html OPTIONAL: ONE WE MADE EARLIER · step 2, OPEN IT button
WEBSITE	https://wmgmm.github.io/part2/#/m6 · the QR code opens it. Every prompt has a COPY PROMPT button there.
TIME	about 15 minutes

STEPS, NUMBERED AS ON THE WEBSITE

1. Build the dashboard in Gemini's Canvas · 8 min

Use Gemini, in a new chat, with the CSV attached and Canvas on from the Tools menu. Pro handles it better, but if no preview appears, switch to Flash. While it builds, open ours in step 2.

NEW CHAT · **Attach** HESA_Estates_Workshop.csv · **Turn on** Canvas

THE BUILD PROMPT

Long prompt, 175 lines, not printed: copy it from the website, step 1, with the COPY PROMPT button.

[Canvas on and attach HESA_Estates_Workshop.csv]

2. Open the one the Matts made earlier, then compare against yours · 2 min

Open ours and run yours beside it. Same prompt, same file, so do they agree?

From the website · Cardiff_Estates_Dashboard.html (OPTIONAL: ONE WE MADE EARLIER, OPEN IT button)

3. Always verify, and repair if required · 5 min

The first version of The Matts' app got the data slightly wrong, and it flattered Cardiff (Thanks Gemini). Now repair your own build: in the same chat, paste the repair prompt and attach the CSV again.

SAME CHAT · **Attach** HESA_Estates_Workshop.csv · **Paste** the repair prompt below

THE REPAIR PROMPT

The app has a copy of its data written inside it. Check every number in the app against the CSV, which is the only source you should trust. List anything that does not match, then rebuild the file using the CSV values only. Do not retype, round or fill in any figure: if a cell is blank, show NEEDS DATA.

[attach the CSV again: Gemini must read the file, not its memory of it]

OPTIONAL: THE CLEANER AUDIT

A new chat is the better audit: a model checking its own work tends to defend it. So we downloaded the HTML with the Download button, opened a new Gemini chat with Canvas on, and attached the app and the CSV together. Afterwards, open Code and Show recent changes to see exactly what it altered. Canvas sometimes will not display an uploaded app, which is why this is optional.

NEW CHAT · **Attach** the HTML you downloaded and HESA_Estates_Workshop.csv · **Turn on** Canvas

PASTE THIS FIRST, THEN THE REPAIR PROMPT UNDER IT

Open a Canvas workspace for the attached HTML file and rebuild it there, so it runs as an app rather than showing as code in the chat.

BONUS EXERCISE

Ten Years of Real Data, Run Twice and Checked

Analyse ten years of Cardiff's real emissions, then check the answer in a second tool before you trust it.

scan for this page

TOOL	Copilot + Gemini · sign in with your Cardiff account
FILES	HESA_Estates_Workshop.csv TEN YEARS OF REAL DATA · top of the page, DOWNLOAD button Verify_And_Repair.md SKILL 5: VERIFY AND REPAIR · step 2, DOWNLOAD button
WEBSITE	https://wmgmm.github.io/part2/#/bonus1 · the QR code opens it. Every prompt has a COPY PROMPT button there.
TIME	about 11 minutes

STEPS, NUMBERED AS ON THE WEBSITE

1. Attach the data and run the prompt · 6 min

Start in Copilot. Download the HESA_Estates_Workshop.csv file from the card above and attach it.

Attach HESA_Estates_Workshop.csv

YOUR PROMPT

Analyse the attached file on university estates and energy use, from the perspective of Cardiff University. Work out every figure by writing and running code (Python), not by estimating. I do not need to see the Python: just use it for the maths. If you cannot run code on this file, say so at the top of your answer and label every figure as approximate.

Output:

1. An executive summary paragraph from a Cardiff University perspective, with specific and actionable information.
2. One publication-quality chart for the most recent year: box plots across every university in the file for emissions per square metre, energy per square metre and renewable percentage, with Cardiff clearly marked and labelled. Place any legend outside the plotting area so it does not cover data points, labels or boxplots.
3. Cardiff reports 100% renewable energy through green tariffs and still reports over 21,000 tonnes of Scope 1 and 2 emissions. Explain how both can be true, and say what the renewable figure does not cover.
4. End with one line labelled KEY FIGURE: the single number this analysis turns on, with its unit, the period or group it covers, and what it shows, written so that someone with only the data file could check it.

[attach HESA_Estates_Workshop.csv]

IF COPILOT WILL NOT TAKE THE FILE, OR GIVES NO KEY FIGURE LINE

Run the same prompt in Gemini with the +, then still do step 2 in a new Gemini chat. If the answer has no KEY FIGURE line, reply: give me the KEY FIGURE line only, as item 4 asks.

2. Verify it in Gemini, with the skill · 5 min

Now Gemini, in a new chat. Download the skill below, then attach it and the CSV with the +. Paste the prompt, then copy only Copilot's last line, starting KEY FIGURE, and paste it after FIGURE TO CHECK. Do not say where it came from.

From the website · Verify_And_Repair.md (SKILL 5: VERIFY AND REPAIR, DOWNLOAD button)

NEW CHAT · **Attach** Verify_And_Repair.md and HESA_Estates_Workshop.csv

THE VERIFY PROMPT

Follow the attached skill file as your instructions.

FIGURE TO CHECK:

[attach both, paste this prompt, then paste Copilot's KEY FIGURE line after it]
